Full-stack engineer building **AI/ML-powered systems** — from concurrent backend services to **fine-tuned LLM applications**. Open to full-time SWE roles starting 2027.

EDUCATION

University at Buffalo

Master of Science in Computer Science; GPA: 3.9/4.0

Buffalo, NY

Aug. 2025 – Dec. 2026

University of Mumbai

Bachelor of Engineering in Computer Engineering; GPA: 3.6/4.0

Mumbai, India

Aug. 2019 – Jun. 2023

TECHNICAL SKILLS

Programming Languages: Go, Java, Python, JavaScript, TypeScript, SQL, C/C++, Scala, Object-Oriented Programming

Backend & APIs: Golang, FastAPI, Node.js, REST APIs, GraphQL, API Integration, Microservices, Authentication, Concurrent Programming, Linux

Frontend & Full-Stack: React.js, React Native, Next.js, TypeScript, HTML/CSS, Responsive UI, Streamlit

Databases & Cloud: PostgreSQL, MongoDB, MySQL, Neo4j, Snowflake, AWS (EC2, S3, Lambda)

Developer Tools: Git, GitHub, GitHub Actions, CI/CD, Docker, Kubernetes, DevOps, Kanban (Agile), VS Code, Postman

AI/ML & Data: PyTorch, TensorFlow, RAG, LangGraph, Prompt Engineering, Hugging Face, NumPy, Pandas, Data Structures & Algorithms

EXPERIENCE

Cloud Transformation Associate — Software Engineering

Jul. 2023 – Apr. 2025

CloudRock

Mumbai, India

- Engineered and deployed a full enterprise **Workday** system implementation for a major insurance client, owning the technical lifecycle from requirements analysis through configuration, integration, and **go-live**.
- Collaborated with HR, Finance, and IT engineering teams to translate complex business logic into **scalable system configurations**, building **reusable workflow modules** to reduce redundant setup work.
- Coordinated with backend, technical, and QA engineers across **data migration**, **system integration**, and **deployment pipelines** to ensure consistent, on-schedule releases with minimal downtime.
- Designed and executed **unit, integration, and User Acceptance Testing (UAT)** suites, debugging configuration logic early to catch defects and reduce downstream rework before production.
- Shipped the system to production **on time and within budget with zero production defects**, reflecting rigorous testing discipline and strong attention to system reliability and scale.
- Partnered directly with client stakeholders to gather requirements and validate system behavior, ensuring engineering decisions stayed aligned with real business workflows and long-term scalability.
- Owned **post-launch support** and technical troubleshooting, diagnosing and resolving functional bugs to ensure a smooth, stable transition to production for end users.
- Authored internal engineering documentation and led **knowledge-sharing sessions** to mentor teammates, streamlining onboarding and improving delivery consistency across future projects.

PROJECTS

Concurrent Web Link Checker | Go, Goroutines, GitHub Actions, CI/CD

Aug. 2026

- Built a **concurrent web crawler and link validator** in **Go** using a **goroutine worker-pool pattern** to extract and validate links in parallel, exposed via both a CLI and web interface.
- Implemented a **GitHub Actions CI/CD pipeline** with unit tests and deployed the application live on **Render**, owning the project end-to-end from design through production.

Live demo: concurrent-link-checker.onrender.com

SentinelAI – AI-Powered Fraud Investigation System | FastAPI, Next.js, GraphQL, PostgreSQL, Neo4j

May 2026

- Architected a **distributed 6-agent backend pipeline** (FastAPI) integrating **PostgreSQL** and **Neo4j** for **graph-based fraud detection**, exposing a **GraphQL API** consumed by the Next.js frontend for investigation reporting.
- Validated the system end-to-end on a case with **8 high-risk transactions**, producing a **fraud risk score of 100** with accurate relationship detection across the transaction graph.

CodeSense – Agentic AI Developer Copilot | FastAPI, React, LangGraph, FAISS, Tree-sitter, Qwen3-8B

Mar. 2026

- Designed, coded, and deployed a **full-stack agentic debugging assistant** (FastAPI backend, React frontend) that retrieves code context, detects bugs, and generates validated patches across the full development lifecycle.
- Experimented with large language models (LLMs) by **fine-tuning Qwen3-8B with QDoRA** on **5,400 samples**, improving **SWE-bench Token F1 from 0.075 to 0.257** and **reducing hallucinations by 93%**.

PROFESSIONAL CERTIFICATIONS

Getting Started with Go | UC Irvine

Aug. 2026

- Covered **Go language fundamentals**, syntax, and idiomatic patterns for building **concurrent applications**.

Introduction to Model Context Protocol (MCP) | Anthropic

Aug. 2026

- Studied **MCP** for standardized communication between AI models, tools, and external data sources, including **client/server architecture** and secure context sharing.

Building with the Claude API | Anthropic

Jul. 2026

- Hands-on training building AI-powered applications, handling **API requests**, **structured outputs**, and prompt workflows.
